

## **RESEARCH PROPOSAL**

Graph Theory is a useful tool when try to analyze and understand large and complex networks. In mathematics, graph theory is defined as the study of the properties of graphs. A graph is a mathematical object interpreted as a set of vertices and a set of edges that join some or all of the vertices. I already studied about domination of a graphs, and its various types of domination of graph in my M.Phil Thesis. So that, I'm eagerly want to know about the huge part of this types of graphical field.
