

STATEMENT OF PURPOSE

In my life, I have always been fascinated and interested in innovation and discovery. Also interested in finding the cause of something occurring. Nowadays, Artificial Intelligence is all around us. The years of my graduation and post-graduation degrees refined and shaped my interest in Computer Application, particularly in the field of Computer Intelligence. Hence, I wanted to shape a research career in this field.

Computer Intelligence, specifically Artificial Intelligence (AI), provides intelligent behaviour to our computer. A broad spectrum of applications exists within the artificial intelligence field, and AI has wide varieties of areas to explore.

From my graduate-level also, I am very interested in AI, so I would like to set my research area in computational intelligence and its related areas. Most likely, I would prefer to focus my studies on how to use the idea of AI in the health sector.

In the current era, bio virus attacks are the most threatening area of our health system. AI can have a vital role in detecting the virus and restricting the spreading of such viruses. Like that, I would like to open my research area in such a manner that should also be helpful in medical science. In this, the AI deep learning and machine learning methods are also focused on my studies.

As far as my strength is concerned, I am hardworking, and I am interested in exploring new ideas in Artificial Intelligence (AI). Most importantly, I like to face new challenges. I feel that my academic background will meet your requirements and expectations. I genuinely believe that I will contribute significantly to the research work and various other activities in your research group. Your favourable consideration of my application will be highly appreciated. I thank you for considering my sincere request and look forward to a positive response.
