PREG PATH AI

In recent days the growth of AI is accelerated into various field .The milestone amongest is biomedical application. It involve data analysis ,image processing ,handling patients history and health is a medical professional in diagnosing. The AI algorithm are designed to eliminate on allopathy medicines and treatment method . When it combines with Diet System , Natural Medicines and Daily Yoga list then it creates the path to renovate the life culture to which may lead to permanent curing . This fieldcontains enormous challenges in predating the way for normal delivery. So the algorithm should be designed to predict not only on medicines but also natural herb diet and daily yoga. This combination makes that turning for Natural Normal Delivery . This process involves the methods be Deep Learning (DL) and Machine Learning (ML) in AI. This method handles the large amount of data Ultrasound images and patient's history to make the prediction pattern . This pattern will be used not only in diagonising also to make a chart to create the turning way for Natural Normal Delivery . When the algorithm leads to success rate this will be a milestone and gynecology and obstetric.
