

AI-POWERED CHATBOT AND VIRTUAL ASSISTANT ON ELT:

The world is becoming increasingly more global in scope, and technology enables individuals to connect to more advanced knowledge, science, and information, which may then be used as a medium for improving teaching and learning. English is the language of business, science, and technology. The Developments in society have an effect on ELT in some way.

Artificial intelligence (AI) has revolutionized language learning by providing interactive and adaptive learning experience (eg-ChatGPT, Duolingo's , Google Assistant) It offers real time conversational practice and learning Strategies. These AI can help students to improve their Speaking , Writing, and Reading Skills)

To Investigate and examine the effect of AI -powered Chabot's & virtual assistants on learner motivation & engagement in English language learners .

Data collected & analysis through Mixed Research and methods by pre and post test to assess English language Proficiency.
