

Researching and analysis of copyright and patent

This research presents an in-depth study and analysis of copyright and patent laws as key instruments of intellectual property protection. The study explores the historical development, legal framework, and objectives of both copyright and patent systems. Copyright primarily safeguards creative works such as literature, music, and art, while patents protect new inventions and technological innovations. The study also discusses the ethical and legal issues related to misuse, infringement, and piracy. It emphasizes the role of governments, organisations, and educational institutions in creating public awareness about intellectual property rights. Case studies are used to illustrate real-world issues of infringement and innovation conflicts.

Key words:

Copyright, Patent, Intellectual Property Rights, Innovation, Creativity, Legal Protection.
