PROJECT PROPOSAL ON GROUNDWATER CONTAMINATION

TITL

Groundwater contamination - prediction and mitigating measures

INTRODUCTION

Groundwater level is an indicator of groundwater availability, groundwater flow, and the physical characteristics of an aquifer or groundwater system. Management of water resources requires input from hydrological studies. This is mainly in the form of estimation or forecasting of the magnitude of a hydrological parameter. The factors that influence and control the groundwater level fluctuation and contamination are determined to develop a forecasting model and examine its potential in predicting water table depth using limited data. Prediction of regional groundwater level fluctuation and purity would guide the way towards conceiving, designing and taking scientific measures to ensure sustainable groundwater management.

OBJECTIVES

- To find the combination of best parameters which have influence on groundwater level of the study area
- To find the impurities and factors influencing contamination of groundwater in the study area
- To develop a model for predicting groundwater level and contamination trends in future
- To identify the best mitigating measure for improving groundwater quality

Register No : 71713401/13400016

FACULTY OF ENGINEERING AND TECHNOLOGY

*The Senate of the University of Kerala hereby makes known that **Suja S. Nair** has been admitted to the Degree of Master of Technology, she having been certified by duly appointed examiners to be qualified to receive the same, and having been by them placed in the **First Class** at the Examination held in **September 2015**, her subject of study being **Civil Engineering** with specialization in **Hydraulics Engineering**.*

Given under the seal of the University

University Buildings

Thiruvananthapuram April 20, 2016

A handwritten signature in black ink, appearing to be "R. Nair", written over a horizontal line.
