Research Proposal

Working Title

Attaining Safety and Services through Architecture.

Abstract

The Dwelling space need more comfort to the users of the building. The cluster of built space creates settlement which consist different approach such as financial and employment facility. This leads to an unorganised settlement which had bonded with different type of people and their occupation. The people at settlement should be provided of appropriate services but as a factor of establishment the sufficient quantity haven't achieved. The planning strategies should have sufficient provision to the all type of people which reflects the healthy functional activity of the settlement. The basic nature of concern settlement need to be studied and this will be helpful to maintain the safety built environment. The systemized services will lead to have the updated lines with multi advantages. The importance of safety with planning should be implemented to avoid development of unauthorized establishment. The zoning of sectors within the settlement to be screened and the quality environment which says about the safety should implement without affecting the basic nature of settlement.
