Cyber security system : An approach that address a severe problem in Cyber Security System.

Abstract : Cyber-security systems, which protect networks and computers against cyber attacks, are becoming common due to increasing threats and government regulation. At the same time, the enormous amount of data gathered by cyber-security systems poses a serious threat to the privacy of the people protected by those systems.

Introduction : Nowadays, nobody has clear idea that how deep they depended on computer networks. For everything directly or indirectly people are depending on computer, computer networks. Most of the services : simple services like Pizza ordering, online hotel reservation to complicated services like Medication, Teaching learning , Banking are provided through internet. Most of Government and Private sectors organisations are using emerging technologies to provide sophisticated services to people and customers.

In recent years, governments and corporations have increasingly relied on cyber-security systems to protect against increasing threats on networks, devices, and organizational and personal information. These systems prevent adversaries from breaking into networks and devices, from sabotaging digital activity, and from accessing private information. At the same time, by monitoring networks and computing devices, cyber-security systems ultimately affect individuals' privacy.

Systems in domains such as intrusion detection, malware detection, data leakage prevention, and phishing identification regularly monitor network traffic, device use, and personal communications.

In many cases, the monitoring system can trace the identities of users and access sensitive information. For instance, many enterprise cyber-security systems monitor IP addresses that can be easily traced back to a particular individual. Moreover, the user's device identification on mobile devices is often accessed by cyber-security applications. Therefore, while cyber-security mechanisms protect individuals from attacks from hackers and other third-party adversaries, they also create new vulnerabilities for privacy violation from the entity that runs the cyber-security system. These vulnerabilities can be realized if the security systems themselves are compromised, 1 if insiders

make use of this information, or if the personal data are used contrary to the expectations of end users. 2 The increasing threat of computer attacks and the intrusiveness of cyber-security mechanisms present policymakers and technology developers with the difficult challenge of balancing security risks against privacy and civil liberties concerns (Tene 2014; Landau 2014). The fact that many national cyber-security policies require the sharing of the detailed information of attack logs and other types of information necessitates an urgent understanding of the privacy risks related to cyber-security (Sales 2013; Nolan 2015). Privacy concerns are among the reasons why employees switch to their personal devices (e.g., smartphones and portable computers) to perform work-related activities (Pfleeger et al. 2014) and home-users turn away from some anti-virus applications (Warkentin and Willison 2009). Therefore, understanding and solving privacy threats is crucial, as those threats can reduce the acceptance and usage of cyber-security systems by organizations and individuals, leading to increased number of threats for everybody.

**Methodology:** To ground this threat, I studied common and novel cyber-security technologies and analyze them according to the potential for privacy invasion. I studied a taxonomy for privacy risks assessment of information security technologies, based on the level of data exposure, the level of identification of individual users, the data sensitivity and the user control over the monitoring, and collection and analysis of the data. I study the results in light of the recent technological trends and suggest some new directions for making these mechanisms more privacy-aware.

**APPOINTMENT ORDER**

Sub:- Establishment – SNIST – Appointment as Assistant Professor – Issue of Orders – Reg.

Ref:- Your application for the above post.

\*\*\*\*

In pursuance of the recommendations of Selection Committee constituted by SNIST, you are hereby appointed as Assistant Professor in Computer Science and Engineering Department, subject to the following conditions:

1. You will be paid a basic salary of Rs.8,000/- P.M. in the pay scale of Rs. 8000-275-13500, as per D.A. merged scale the basic pay is Rs.12,000/-p.m..
2. You will be paid DA, HRA and CCA as per college rules.
3. You will be on probation for two years.
4. A faculty member leaving the college service during a semester leads to dislocation in class work and disruption in service to the students. It is, therefore, not desirable for a faculty member to leave the college service during an ongoing semester. If any faculty member wishes to leave the college service, he/she may do so during summer/winter vacations with one month notice period. However, if a faculty member wishes to leave during an ongoing semester, he/she may resign from the post with one month notice or on payment of one month gross salary in lieu thereof.
5. Your service conditions will be governed by the Rules and Regulations of the Institute from time to time.
6. Your appointment can be terminated with one month notice at any time without assigning any reason.
7. You have to submit attested photocopies of your original certificates of qualifications and experience for record in our office.
8. You will have to deposit your original certificates of all your qualifications with the institute since it is experienced by the institute that some teachers have left the institution without giving any notice and without clearing the dues in library or elsewhere. This irregularity disrupts the academic and administrative functioning of the institution. In case you are not agreeable to this, you are requested to deposit one-month salary with the institute, which is recoverable from your salary in 4 monthly installments from the date of your joining the institute. Entire deposit shall be paid back to you if you leave the college with requisite notice and after clearing all the dues payable.

This order takes effect from the date of your joining the institute.
